Hawk Cloud Testing Environment

To run our "one click" test our project 4 code base, the database must first be configured using

```
rake db:migrate RAILS_ENV=test
```

Then simply execute the command

```
rake test
```

or

```
bundle exec rake test
```

If you have a different version of rake installed other than 10.4.2 then use the latter.

This is the result of our test on our final code commit on the master branch. It returns no failures, and no errors after 47 tests.

```
rustyriedel:~/workspace (master) $ bundle exec rake test
Started

  47/47: [========================================] 100% Time: 00:00:02, Time: 00:00:02

Finished in 2.55003s
47 tests, 197 assertions, 0 failures, 0 errors, 0 skips
```
